| Vocabulary |  |
| :---: | :---: |
| variable | something that can change |
| string | a list of characters |
| integer <br> number | pos/neg natural numbers and zero |
| floating point | decimal number |
| length | the length of the string |
| Modulo | Finds the remainder |
| Boolean | True/False |
| Syntax | Grammar/Structure of language |
| range ( 1,10 ) | the numbers 1-9 |
| range(10) | the numbers 0-10 |
| Conditionals |  |
| If..... <br> :then..... <br> else. $\qquad$ | If the statement is true then do command under then else do command under else |
| while | While this is true loop the command under the conditional |
| While | loops forever |
| True |  |

## Conditionals (cont)

for each For every item in the list repeat the item in command under the loop that many name of times. (a string is a list too) list

## Naming Conventions

## Rules for naming variables:

- letters
- numbers
- underscores ( $\_$)
- can start with letters or underscores ONLY
- NO SPACES

Valid names:

- _mystr
- my3

Hello_there
Invalid names:
$3 m y=$ "hi" -- cannot start with number

- first name = "hi" -- no spaces allowed
- first-name -- dashes are not accepted

```
Lists
#this is how you maek a list in
python
shoppinglist = ['coke zero',
'bacon', 'water', 'jelly', 'gummy
bears']
print (shoppinglist)
```

## Lists (cont)

Published 5th February, 2016.
Last updated 17th March, 2016.
Page 1 of 4

## Adding strings number

```
```

mystring = ""

```
```

mystring = ""
count = 0
count = 0
while count < 5:
while count < 5:
mystring = mystring +
mystring = mystring +
str (count)
str (count)
print (mystring)

```
```

    print (mystring)
    ```
```

```
print (shoppinglist[0])
```

print (shoppinglist[0])
\#prints the first item of the list
\#prints the first item of the list
list_num = 0
list_num = 0
while list_num <
while list_num <
len(shoppinglist):
len(shoppinglist):
print ("List:",
print ("List:",
shoppinglist[list_num])
shoppinglist[list_num])
list_num =list_num+1
list_num =list_num+1
\#for loop--> same as the above
\#For every item in that list
we're going to print it.
for item in shoppinglist:
print (item)
numbers = range (1,5)
\#print up until less then the last
number.
for item in numbers:
print (item)

# a string is a list of

characters, letters, numbers, etc.
mystr = "hello"
for letter in mystr:
print (letter)

```
