# Essentialists

Noam Chomsky / Generative Grammar

→ Primary subject matter: Abstract universal principles that explain the properties of specific languages

- → The essence of our language is innate
- → The basis of language is **universal**
- → Semantics and pragmatics are not a part of
- the study of language (Chomsky)
- → **Descriptive** grammar with a penchant for judgment elicitation and intuition

→ Goal: An internalized generative device that characterizes an infinite set of expressions

#### Emergentists

#### **Edward Sapir**

 $\rightarrow$  "Language is primarily a cultural or social product."

→ Primary subject matter: Linguistic

communication, cognition, variation and change

→ Cognitive, cultural, historical and evolutionary explanations of linguistic phenomena

→ Children's language as a series of stages in an ontogenetic process of developing adult competence

→ Goal: A mainly conventional and culturally transmitted system for linguistic communication

### Externalists

Leonard Bloomfield / "structuralists"

→ Primary subject matter: Language use:

structural properties of expressions and languages

→ Use of corpora

→ Descriptions of expression structures and interrelations

- → Prediction of properties
- → Patterns inferable from accessible features of language use
- → Goal: A grasp of the distributional
- properties of a language

# I-Language

Individual: strictly a property of individual human beings, not groups or communities. Internal: meaning is internal and a language is a state your mind/brain is in. Intensional: a language is a specific

procedure, generating infinitely many

- expressions of that language.
- $\rightarrow$  Essentialist notion.
- $\rightarrow$  Study of language in isolation.
- → Two people could know different I-

languages yet generate the same string of words.

# E-Language

**Extensional:** research-based on attested utterances or extensionally definable objects. **External:** view that conceives of a language as a public, intersubjectively accessible system used by a community of people.

→ Other speakers can be involved in the study of a language, not just one object.

→ Essentialists oppose this notion.

## Competence/Performance

→ Essentialist distinction (Chomsky)

→ **Competence:** what knowing a language confers, a grasp of all sentences

→ Performance: real-time use of a language

→ **Criticism:** "The structure that underlines a language use reflects the operation of general principles of human cognition, they shape how individual speakers and hearers represent form and meaning."

### Semantics

→ Chomsky: "Semantics are merely a part of an interface level/form of syntax and are not related to the language faculty." (not all Essentialists agree with this view)

 → Bloomfield: "It is okay to assign semantics to other fields than language because of the underdeveloped state of semantic research."
→ Autonomy thesis: syntactic form is independent from semantics and pragmatics.

# Scales

**Ordinal scale**: a partial ordering equivalence in acceptability or ranking in degree of unacceptability.

**Interval scale**: a measure of distance between ordinal positions.

Magnitude estimation: a measure of

subjects' judgments of physical stimuli on an interval scale.
